Ibrahim Araji

Ontario, Canada | +961 78 969 318 | araji_ibrahim@outlook.com | LinkedIn: ibrahim-araji | GitHub: Ina-06

Profile

Software engineer building production automation and full-stack tools for real-world logistics operations. Shipped Python automation systems and a real-time Next.js/Firebase dispatch platform used daily at a U.S. delivery operation, cutting manual dispatch workload by an estimated 75%. Strong foundation in data structures, algorithms, and concurrent programming, with a focus on applying optimization and machine learning to logistics and operations.

Skills

Languages: Python, JavaScript/TypeScript, Java, C, SQL
Frontend: React.js, Next.js (App Router), HTML5, CSS3, Tailwind CSS, Responsive & Cross-Browser Design, Component Architecture
Backend & Data: Firebase (Firestore, Storage, Admin SDK, Auth), REST APIs, WhatsApp Business Cloud API, Node.js, pandas
Automation & Reporting: Playwright, PyInstaller, ReportLab, exceljs, @react-pdf/renderer, Excel/PDF report generation
Tools: Git, GitHub, VS Code, Linux, Vercel, Netlify
Computer Science: Data Structures, Algorithms, Multithreading & Concurrency, OOP, System Design
Spoken Languages: Fluent in Arabic, English, and French

Experience

SwiftForce Logistics (Amazon Delivery Service Partner) — Remote (U.S. Based)
Dispatcher (Full-Time) → Automation Engineer Intern — *Oct 2025 – Present*

- Served as primary point of contact for 40+ on-road drivers per shift, coordinating delivery routes, driver check-ins, and route completions in real time.
- Coached Amazon delivery associates on vehicle-inspection (DVIC) compliance; built a Python/pandas workflow cross-referencing weekly inspection reports with attendance data to flag pre-trip inspections completed in under 90 seconds.
- Promoted to Automation Engineer Intern to build tooling for the dispatch team at scale, shipping two production Python systems and a full-stack web platform used daily.
- Built **Cortex Automation**, a Playwright browser-automation suite with a two-threaded parallel pipeline that tracks pre-trip vehicle inspections and driver data across a paginated internal logistics platform; packaged with a GUI and Excel output via PyInstaller, with a ReportLab-generated setup guide for non-technical staff.
- Built **SWFLBot**, a WhatsApp Business Cloud API tool with a custom GUI automating real-time driver communications, packaged as a standalone Windows executable with a 150+ test suite; its two-stage preview-and-confirm send pipeline cut manual dispatch workload by an estimated 75% while safeguarding bulk messaging accuracy.

MSII Marketing Science International Inc. — London, Ontario
Freelance Web & Coding Assistant — *Feb 2022 – May 2023*

- Built and edited HTML/CSS templates and assisted with JavaScript/Python feature development and bug fixes for client web projects, gaining hands-on Git and deployment experience.

Projects

SWFL Closing App — Real-Time Dispatch Platform | *Next.js, TypeScript, Tailwind CSS, Firebase* — closing-swfl.vercel.app

- Built a real-time web app that replaces the station's paper tracking sheet and WhatsApp updates with one integrated flow, from opening dispatch to end-of-day closing.
- Designed a desktop dispatcher interface (roster import, per-driver ETAs, server-side parsing of returns with non-blocking warnings, performance ratings) and a phone-first closer interface with live driver cards sorted by ETA, arrival timestamps, and van, key, and fuel check-in.
- Automated end-of-day PDF reports (@react-pdf/renderer) and filtered Excel return exports (exceljs); secured access with server-side keys, Firebase custom tokens with role claims, and single-use, expiring closer access codes.

Personal Portfolio — Interactive Comic-Book Site | *Next.js, React, Tailwind CSS, Resend, Netlify* — ibrahimaraji.netlify.app

- Designed and built an interactive single-page portfolio around a scroll-driven 3D page-turn mechanic and hand-authored SVG sprite animation, with a fully keyboard-accessible reduced-motion fallback.
- Implemented a serverless contact endpoint on Next.js API routes with server-side validation, honeypot spam filtering, and transactional email delivery via Resend.

UniTok — Social Platform for University Students | *Next.js, React, TypeScript, Python* — unitok.app

- Built a Next.js/React frontend with a reels-style scrollable feed and discussion forums for campus life; integrated Python backend services and collaborated with a team via Git/GitHub for version control, code review, and deployment.

Connect Four AI — Multithreaded Game Engine | *C, Concurrency, Algorithms* — github.com/Ina-06/Connect4KHI

- Built a multithreaded Connect Four engine in C, parallelizing game-tree search across concurrent worker threads and implementing Minimax with Alpha-Beta pruning for deep, real-time move evaluation; optimized memory management for high-performance tree traversal.

Education

American University of Beirut — Beirut, Lebanon
Bachelor of Science in Computer Science — *Sept 2023 – Expected Spring 2027*

- Dean's Honor List — Spring 2024–25, Spring 2025–26.
- Planned coursework (Spring 2027): Machine Learning, Theory of Computation, Cyber Security, Programming Languages.
